# SensoControl®

Diagnostic Test Equipment for Hydraulics

ENGINEERING YOUR SUCCESS.

All the instruments meet the guidelines of the European Community (EU).  
It is confirmed that these products are approved acc. to following standards.

DIN/EN 61000-6-2  
DIN/EN 61000-6-3

**Note!**

This document and other information from Parker Hannifin GmbH, provide product or system options for further investigation by users having technical expertise. Before you select or use any product or system it is important that you analyse all aspects of your application and review the information concerning the product or system in the current product catalogue. Due to the variety of operating conditions and applications for these products or systems, the user, through his own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance and safety requirements of the application are met. The products are subject to change by Parker Hannifin GmbH at any time without notice.

Technical subject to change. March 2010.

- Long-term stability
- Rugged design
- Easy operation
- Flexible use on site
- Documentation of measured values

**SensoControl®** handmeters and complete measuring systems are perfectly suitable measuring tools for every application. Whether they are used in the industrial area, in mobile hydraulics, for service or repair: measuring and processing of hydraulic values is the basis of safe trouble shooting. The systematic search for errors with modern aids is something the service engineer simply cannot do without.

High-speed processes, such as switching valves, cylinder strokes, pressure peaks, differential pressures and flow changes must be measured and evaluated simultaneously.

The **SensoControl®** handmeters have been specially developed for the following applications:

- Measurement and display of all hydraulic values, such as pressure, differential pressure, pressure peaks, temperature and flow, as well as speed.
- They are perfectly suitable for the mobile recording of measured values and feature high precision combined with easy operation.

All measuring devices as well as their accessories are manufactured and tested in our own plants. Our ever-increasing insistence on quality and flexibility make Parker a reliable partner.

- Digital pressure measurement and back-lit display
- Accuracy  $\pm 0,5\%$  FS
- Display with bar graph (trailing indicator) with peak & hold function
- Pressure peaks captured – 10 ms scanning rate
- Easy operation
- Long-term stability
- Back-lit measured value display
- Pressure ports stainless steel 1/4" BSP

### ServiceJunior Digital Pressure Gauge

The **ServiceJunior** makes possible the measurement and display of pressures with one instrument. Measured values are shown with high precision on a 4-digit display. Pressure peaks are securely captured at a scanning rate of 10 ms.

The **ServiceJunior** is distinctive through its very simple operation. With its convincing price to power ratio, the instrument offers all the advantages of digital pressure measurement.

- ① Trailing-indicator display with bar-graph due to peak & hold function
- ② Actual value back-lit display (15 mm)
- ③ Battery level display
- ④ Display of MIN/MAX or Full Scale Range display (FS)

Menu functions

-  On/off switch

Reliability Cycles (10 <sup>6</sup> )	100

- Easy operation
- Prevention of measuring errors due to automatic sensor recognition
- Printer and PC connection
- Two-line display
- Rugged design

The **Serviceman** has 2 inputs for sensors. This enables a differential pressure measurement by pressing only one key. Fast comparisons of actual and set values are done very easily.

The **Serviceman** is extremely robust and insensitive to dirt, so that it can be used in even the toughest conditions. The digital display avoids reading errors.

The **Serviceman** is small and light:  
perfect for mobile applications.

**Serviceman incl. external power supply  
2 Inputs (5 pin) incl. PC Interface**

The data output can be used to connect a PC. Data printout is valid under the documentation obligatory under ISO 9001.

The Min/Max memory permits the reading of peak values. Pressure peaks which could lead to damage are detected. **Please note:** The **Serviceman** cannot display negative pressures and flow volumes. If an SCPT sensor is connected, only the pressure signal could be displayed. For temperature measurement please use a separate sensor.

Like all other **SensoControl**<sup>®</sup> measuring devices, the **Serviceman** is provided with sensor recognition. The measuring ranges are automatically scaled and units shown on the display. This avoids measuring errors and time-consuming adjustment work.

- DISPLAY (two line)  
INP1 and INP2; ΔP display  
Battery level display

- Included

- Easy operation
- Self running installation
- On-line data recording
- Storage of readings in MS Excel format
- Analysis of data with standard software
- Print out readings on site

With the PC Software data transfer from Serviceman to PC or laptop is possible.

The software included is compatible with MS Windows 98/2000/XP.

Recorded data can be further processed and analysed with standard software (e.g. MS Excel).

— not available

● Included

- Digital pressure measurement and back-lit display
- Displays pressure peaks (10 ms) both numerically and graphically
- Measured value memory for storing pressure sequences (5000 measured values)
- Transfer of the stored memory content of up to 16 devices to PC (USB) via radio-wave interface
- Analysis and modification of measured data with "JuniorWin" PC software

#### Innovative memory technology

**ServiceJunior wireless** is a real innovation: Pressure values can be measured, displayed and stored.

The **ServiceJunior wireless** – with its unique, intelligent memory management – is capable to record individual or multiple pressure values from the machine or installation.

Stored data is transmitted to a PC via distances of up to 150 meters. The "**JuniorWin**" PC could be used to set the limit value (REC Auto function) and the desired configuration. This allows applications under harsh conditions with up to 1000 bar working pressure.

**ServiceJunior wireless** allows you to save time and costs when monitoring machines and installations comfortably from your plant office.

Additionally you can analyse and archive the data on your PC.

The device is ideal for monitoring, maintaining and servicing machines and installations in industrial and mobile hydraulic systems.

- ① Trailing-indicator display with bar-graph due to peak & hold function
- ② Actual value back-lit display (15 mm)
- ③ Battery level display
- ④ Display of MIN/MAX or Full Scale Range display (FS)

Menu functions

- ON/OFF** On/off switch  
Back-lit display
- MIN/MAX/FS** Minimum/maximum value/  
FullScale
- MENU/ZERO** Menu: auto shut-off  
Choice of units  
Zero: Zero point correction
- RESET/OK** Delete MIN/MAX value  
Confirm menu function

**ServiceJunior wireless**

**ServiceJunior wireless (with radio-wave interface):**

Range: -1...016 bar/0...100 bar/0...400 bar/0...600 bar/0...1.000 bar

**SCJNP-xxx-01-RC**

- 1 ServiceJunior wireless (acc. to pressure range)
- 2 batteries 1,5 V alkaline
- 1 adapter SCA-1/4-EMA-3

See page 77 for kits and equipment cases.

### The ServiceJunior *wireless* system

- PC adapter for sending and receiving data (1)
- Wireless transmission of parameters and data  
(Exporting the measured value memory)
- Pressure monitoring for up to 16 measurement points (2-4)

- **Long-term monitoring**  
Damaging events can be documented.  
This enables quick and precise troubleshooting (peak pressure measurement).
- **Storage of measurement data**  
Saves user-defined critical pressure ranges
- **Radio-wave transmission up to 150 meters**  
Enables cable-free installation on difficult-to-reach sites (such as rotating equipment).  
The measured location and the location for recording measurements do not need to be close together.
- **Saves costs during diagnostics**  
Simple and easy to install (battery operated, no cabling)

## Memory functions

An example recording measurement with the REC Time/ REC Auto setting

### REC Time:

Recording time (e.g.) 300 s ÷ 5000 intervals

- Interval = 60 ms
- 10 ms scanning rate = 6 measurements
- The maximum value (MAX) is determined from these measurement values and then saved
- 5000 (MAX) measured values are saved

### REC Auto:

Monitoring / control of pressure values

All pressure values exceeding a limit value (e.g., 100 bar) are saved within a defined recording interval (e.g., 100 ms).

10 ms scanning rate = 10 measurements

The maximum value (MAX) is determined from these measurement values and then saved.

1 = 101 bar

2 = 102 bar

3 = **108 bar MAX** value

This measured value is then saved for this interval (100 ms).

All other measured values are deleted.

...

9 = 105 bar

10 = 104 bar

- Instruments with 3-channel and 4-channel technology
- Easy operation due to automatic sensor recognition
- PC interface
- Powered by rechargeable battery
- Rugged design

**The Parker Service Master *Easy*** is a multi-channel hand meter for the simultaneous measuring of important hydraulic values:

All hydraulic parameters such as pressure, differential pressure, flow and hydraulic power can be measured, displayed, stored and processed.

To meet the requirements of both modern industrial hydraulics and complex mobile hydraulics, we offer a range of different models:

## Parker's portable measuring instruments can be used in three different versions:

### 1. Measuring and readout

Through automatic sensor recognition all measured values are shown immediately on the display. Each input can be used as required. The display switches automatically to the appropriate line size.

- **Peak pressure measurement (MIN/ MAX display)**  
The scanning rate of 1,000 measurement values/s captures rapidly occurring pressure peaks within the space of a millisecond. The Parker Service Master Easy can also be switched into fast mode.
- **Differential pressure measurement**  
Exact  $\Delta p$  measurement is achieved by means of the  $\Delta p$  adjustment. Under operating pressure the

deviation of the pressure sensors relative to each other is corrected. For load sensing control the exact  $\Delta p$  setting is a prerequisite for trouble-free functioning of the hydraulics. A combination of  $\Delta p$  (bar) and flow Q (l/ min) is displayed as hydraulic power P (kW).

- **External sensors**  
Analog signals such as those from a force or stroke sensor (external sensor) can be measured using external modules. Electrical currents or voltages (like those from proportional valves) can also be captured.

### 2. Data logging and recording

The recording (storage) of measurements provides documentation of settings and the actual condition of the hydraulics. Measurements can be further processed on a PC with SensoWin® software. This is ideal for customer care or service since the measurements can be called up at any time.

With the special storage technology, all pressure peaks in the hydraulic system can be captured independently of the set measurement time (storage time). Within each storage interval one min. and one max. value is stored. The user has only to pre-select the measuring time. Individual setting of the storage interval is likewise available (for example, 10 ms).

- **Start-stop function**  
The start and finish of measurements are controlled by the start/stop key only. The two buttons can be used to quickly and easily save the measured values. No additional default settings are needed.

- **Program-controlled recording**  
Various programs may be selected:
  - Auto-trigger:  
Recording starts by pressure increase (60 bar, increasing slope)
  - Manual: Start by pressing enter key
  - Point-to-point measurements: Save individual measurements with the press of a button.

Various save functions can be selected with the particular starting conditions. All the connected channels (sensors) are measured and stored. Program-controlled storage is particularly advantageous during the search for faults in hydraulic machinery. The point when the cause of damage occurs (for example, pressure peak or pressure drop) is not as a rule foreseeable. With the help of SensoWin® the recording can be subsequently analysed exactly.

### 3. OnLine Operation

In On-line operation all measurement values are transferred directly to a PC and subsequently stored. The current graphic display in SensoWin® allows the hydraulics to be set (valve position or pressure load) whilst the test is running.

**Dynamic MIN-MAX record/save:**

For each sensor (channel) up to 2,000 memory intervals could be created with **The Parker Service Master Easy**. Each memory interval saves a pair of data points consisting of one MIN and one MAX value.

Running a constant scanning rate of 1,000 readings/s this will correspond to 300 readings (interval). The highest (max) and lowest (min) will be carried to the measurements memory.

In a recording session of 10 min and 2,000 intervals, the length of each storage interval is 300 ms.

The connection of these data points creates a measured graph and guarantees the capture of pressure peaks.

- Portable multi-function hand-held measuring instrument
- Pressure, temperature, flow and speed can be measured, monitored and analysed.
- Measurement and display of over 50 channels.
- Measured value display: numerical, bar graph, pointer, curve graph
- Project templates can be saved and loaded.
- Interfaces: CAN, LAN, USB
- Total memory with up to 1 billion measured values
- Measured data can be (automatically) recorded, saved and analysed with the **SensoWin® 7 PC software and a LAN or USB connection.**

The application possibilities for hydraulics have recently increased throughout all areas of drive and control systems. This trend has been particularly noticeable in the sectors of machine, plant and automotive construction. At the same time, hydraulics and electronics have become increasingly intertwined. Parker's new hand-held measuring instrument – **The Parker Service Master Plus** – helps you to deal with these new trends. It has never been so easy to follow the complex processes in these sectors with measurement, display and analysis. Potential uses include preventative maintenance, commissioning, troubleshooting and machine optimization.

The expanded requirements of these modern applications (such as the increased number of measurement points, longer cable lengths and high noise immunity) have driven further development of the CAN bus. Parker's CAN bus sensors now take advantage of the bus system's automatic sensor detection capability to provide an easy-to-install Plug & Play solution. Compatibility with existing diagnostic sensors is also provided.

Our proven storage strategy is focused on MIN and MAX value measurements. Combined with a wide variety of value presentation styles, these features make effective solutions-oriented analysis possible.

The **SensoWin®** PC software offers additional methods for analysis, control and remote maintenance using LAN and USB connections. Together with this software, **The Parker Service Master Plus** is a truly user-friendly measuring instrument that can be used for any type of diagnostics application.

110/240 VAC power supply, battery life 8 hours, recharging time 3 hours

Modular design for up to 16 analog channels or 2 Highspeed channels (0,1 ms) automatic sensor recognition

PC Interface (USB 2.0); ACT/MIN/MAX measured value transmission to the SensoWin® software, terminal for USB mass storage devices

2 x CAN-busnetworks with up to 32 channels

LAN interface for remote monitoring, micro SD memory card for storage enlargement

High protection from moisture and dirt thanks to cover caps and a rubber protective sleeve, Protection Class IP64

Easy to carry and hang up with carrying strap

Portable multi-function hand-held measuring instrument – strong in design and tough in operation

Illuminated display for good readability in any situation

Large keyboard and fonts for easy operation and readability

Ergonomic housing shape ensures convenient portability and long operating times

Protection of the housing, affording usage in tough environments and absorption of shocks

Big 5.7 inch colour display for clearly viewing the extensive information

Intuitive operation thanks to clear-cut control elements and function-oriented keys

- Display of measured values as figures and bars
- Fixing of alarm ranges in green, yellow and red
- Trailing pointer function with MIN and MAX values

- Up to 4 channels in one large-format display
- Simultaneous display of ACT, MIN and MAX values
- Information lines for current settings, events and views
- Individual measurement channel identifier

- Up to 8 channels in one display
- Colour allocation of the individual channels
- Uniform headings with measurement titles, sensors connected, interfaces, date, time and battery condition indicator
- Display can be changed between MIN and MAX values and full scale

- Up to 8 channels in one graph display
- Fine, precise graph image thanks to high definition display
- Choice between ACT and MIN/MAX value display
- Automatic and manual scaling of the time axis for optimum measured value display

- Large-area pointer display of measured values
- Trailing pointer for MIN and MAX values
- Alarm range in green, yellow and red
- Further channels can be called up with the arrow keys

- Easy operation
- Windows® 2000/XP/ VISTA
- Simultaneous representation of 16 curves
- Zoom functions
- Linking of measuring curves
- Tabular listing of measured values
- Calculation of extreme value
- Curve shifting function
- Free selection of units and measuring ranges
- Cursor functions
- Transmission of set-up parameters from The Parker Service Master
- Automated measurement procedure and documentation print-out

### General

The **SensoWin®** software is an easy to operate software package for reading and processing the measured curves recorded by **The Parker Service Master Easy** or **The Parker Service Master Plus**.

Documentation and certificates can be created easily and at low cost since **SensoWin®** can make use of all Windows features.

### Functions

Up to 16 different curves can be represented in a diagram. The curve shifting function allows exact hydraulics analysis. A power performance curve can be created to evaluate a pump.

Leaks and pressure losses can be detected by generating a differential value function.

With the cursor, a hydraulic procedure can be examined time-dependent. For each curve, extensive information is provided; **The Parker Service Master Easy** or **The Parker Service Master Plus** measurements can be reproduced at any time.

The change of the ranges and units allows later adjustment for presentation in a diagram.

Tabular presentation of ACT/MIN and ACT/MAX values, smoothing of the measurement curve and mathematical links are important functions in the analysis of the hydraulic system.

Date and time are documented with each measurement. This considerably facilitates later allocation of values.

Direct transmission of measured values from **The Parker Service Master Easy** or **The Parker Service Master Plus** to the PC is also possible.

Current events (pressure peaks, etc.) are visible while the process is running (on-line function).

SCMA-FCU-600

SCMA-VADC-600

The Parker Service Master family  
or Serviceman

Measurement of electrical signals with  
The Parker Service Master

#### ■ Measuring frequency with the SCMA-FCU-600

The SCMA-FCU-600 can be used to connect frequency signals (for example, from turbines, flow counters or tachometers) to the The Parker Service Master Easy or the The Parker Service Master Plus. The instruments can process sinus and rectangle signals from 1 Hz to 5 kHz with signal amplitude from 20 mV to 10 V. Configuration is possible via USB and PC-software.

#### ■ Power supply for the external sensor

An external sensor can be supplied with 24 V using the SCMA-FCU-600.

#### ■ Analog or CAN output

The SCMA-FCU-600 can be connected either to an analog input or a CAN input.

#### ■ Measurement of external signals with the SCMA-VADC-600

Signals such as 0/4...20 mA or 0...10 V from auxiliary sensors, (for example, for torque, power or stroke) are connected to the TheParker Service Master.

Typical applications:

- Force/path diagram
- Torque/flow volume nominal lines

#### ■ Current/voltage measurement

Electric currents up to 4 ADC and voltages up to 48 VDC can be measured with this module.

Applications:

- Current consumption of a proportional valve
- Measurement of switch status in motors/pumps

## Pressure/Temperature/RPM Measurement

---

Various sensors are available depending on the measurement requirements.

### 1 SCPT-type pressure/temperature sensors

- Robust stainless steel design
- Response times of 1 ms
- Capturing of pressure peaks
- Accuracy  $\pm 0,25$  % typ.
- Diagnostic adapter

### 2 SCT-type temperature sensors

- High-pressure-resistant temperature probe for hydraulic measurements
- Measures oil temperatures up to 125°C
- Screw-in or manual probe

### 3 SCPRM-type tachometer

- Contactless RPM (speed) measurements
- Measure up to 10000 RPMs
- With 2-meter fixed cable

- Robust stainless steel design
- Response times of 1 ms
- Capturing of pressure peaks
- Accuracy  $\pm 0,25$  % typ.
- Flexible operation
- SCPT series

Fast response times guarantee the safe capture of pressure peaks in hydraulic systems. The robust stainless steel construction allows a variety of applications, for example cooling water or pneumatics.

All pressure sensors are delivered with a diagnosis adapter (M16x2) installed. Connection to the hydraulic system takes place quickly and safely. Times for installation are reduced.

Pressure measurements	
-1... 015 bar	Pneumatics/ low pressure
0 ... 060 bar	Medium pressure
0 ... 150 bar	Medium pressure
0 ... 400 bar	Operating pressure hydraulics
0 ... 600 bar	High pressure
0 ... 1.000 bar	High pressure peaks
Temperature measurements

**Pressure/Temperature measurement SCPT**

There is a selection of various measuring ranges for the measuring of pressures. Sensors can be used for pneumatic applications and also for measuring pressure peaks up to 1000 bar. The pressure/temperature sensors of the SCPT series have a temperature channel which is retrieved via the TEMP key.

**Diagnostic adapters**

All pressure sensors in a measurement case (kit) are provided with a factory-assembled SCA-1/2-EMA-3 diagnostic adapter. The pressure sensors can be adapted to all standard measuring connections with the help of diagnostic couplings supplied. They are perfectly suitable for a quick and flexible diagnoses in hydraulic applications.

- Robust stainless steel design
- Response times of 1 ms
- Capturing of pressure peaks
- State-of-the-art CAN bus technology
- Simple wiring with SPEEDCON®
- Long cable lengths up to 100 m
- Sensor identification LED (SIL)

All the advantages of the analog SCPT sensors are combined with state-of-the-art CAN bus technology. Simple wiring with up to 8 sensors on one bus cable and the SPEEDCON® quick-plug screw connection. Plug & Play functionality without much configuration efforts.

All pressure sensors are delivered with a diagnosis adapter (M16x2) installed. Connection to the hydraulic system takes place quickly and safely. Times for installation are reduced.

## 10 Temperature Measurement SCT

---

- High pressure-proof temperature sensor for hydraulic measurements
- Measurement of oil temperatures up to 125 °C
- Flexible operation
- Screw-in or manual sensor

In hydraulics, temperature measurements serve to locate faults and avoid the kind of damage caused by excessive oil temperatures in critical parts such as pumps and proportional valves.

To get the exact temperature, the measurement is done directly in the tube or hose line.

The screw-in sensors SCT-150 are compatible with flow measurement turbines SCFT-xxx-02-02.

**SCT-150 (-25°C...+125°C)**

Oil temperatures in tanks and containers are measured with the help of hand probe SCT-150-0-02

The temperature sensor SCT-150-04-02 can be adapted to the hydraulic system up to a system pressure of 630 bar. The male stud is compatible with the test points of the GMA3/20 series and with flow turbine SCFT-xxx.

The Parker Service Master *Plus*  
or The Parker Service Master *Easy*

**SCT-400-K-01 with signal converter SCTA-400-02**

High temperature-proof thermocouple-sensors are used for the measurement of exhaust-gas temperatures up to 1,000 °C in diesel engines.

The converter SCTA-400 is compatible with all thermocouple-sensors of the model K.

SCT Temperature Sensor ( $T_{max} = 1.000\text{ °C}$ ) not for Serviceman

- Contactless measurement of rotational speed
- Measurement of rotational speed up to 10,000 rpm
- With fixed cable 2 m

Rotational speed-dependent data, such as delivery from a variable pump, are determined ideally in combination with the pressure and flow-test of a hydraulic drive.

Contactless measurement (opto-electronic principal) can be done quickly and easily.

Rotational speed is detected, for example, at a main drive shaft (e. g. power take-off shaft of a tractor), and displayed on the hand-held device. Installation or adjustment is not necessary.

Rotating shaft - non-contact measurement of rotational speed.

Contact measurement of rotational speed with the contact adapter

Front face measurement of rotational speed with contact adapter.

For accurate acquisition of the opto-electronic signal, please use the supplied reflecting strips.

For a shaft or belt, the rotational speed is measured directly with the contact adapter.

## Volume Flow Measurement

---

Depending on the measurement job to be done, various measuring instruments are available to the hydraulic technician:

### 1 Turbine flow meter type SCFT

- Very low flow resistance
- Built-in measurement points for pressure and temperature
- Very simple installation into a hydraulic system
- 6 different measuring ranges up to 750 l/min.
- Recording of a p/Q characteristic curve with a load valve to determine hydraulic performance

### 2 Hydraulik tester type SCLV

- High-pressure resistance up to 480 bar
- 2 Measuring ranges up to 750 l/min
- Integrated overload protection
- Reverse-mode operations

### 3 Flow meter type SCQ

- Flow measurement with direction indication
- Very fast reaction time < 2 ms
- Wide viscosity range
- Screw-in cartridge in connector block SCAQ

In addition to pressure measurement, the precise determination of flow volume in hydraulic equipment gives important evidence of the condition of the hydraulics. The efficiency of hydraulic drives such as hydrostatic units or variable pumps depends on the amount of flow. Hydraulic performance is determined by pressure and flow. The degree of wear in a hydraulic drive can be ascertained by comparing nominal and actual values. The resulting measurements can be used, for example, in preventive maintenance for systematic servicing and cost reductions. In mobile hydraulics, the efficiency of the machine is continually checked and documented. The diagnosis of pressure and flow thereby gives a total analysis.

### Flow measurement with low flow resistance combined p/T/Q measurement

#### Function

A turbine wheel is driven by the oil flow. The frequencies thus produced are processed by digital electronics. The influence of turbulent flow effects is compensated for. Because of the low flow resistance  $Q_R$  the hydraulic circuit operates with very low losses.

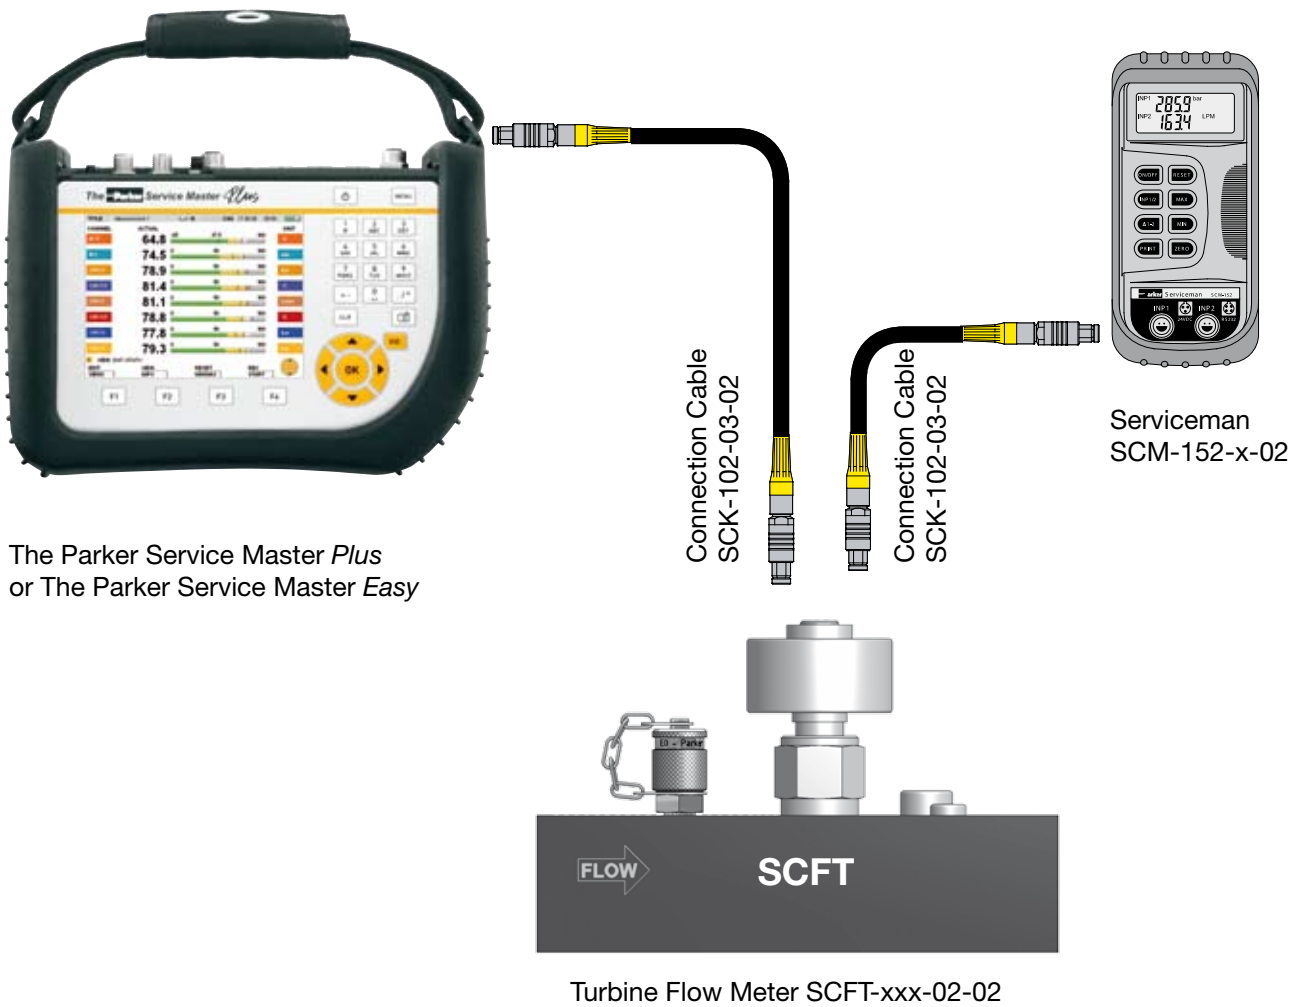

For pressure measurement the turbine is equipped with an EMA-3 test point.

Oil temperatures are measured direct in the oil flow. Consequently all the important measurement parameters are available at one measuring location.

#### Applications

- mobile diagnosis
- p-Q measurement in construction and agricultural machines
- hydraulic tests with load valves
- automatic scaling

### Precise measurements of flow, pressure and temperature

#### Special features:

- Easy to use in both flow directions; integrated oil bypass protects the system, testing device and operator from surge pressures
- User-selectable flow direction enables smooth connections and simple measurements
- Can be put into use quickly with pumps, valves, motors, cylinders and hydrostatic drives

The hydraulic testers are designed for testing the functionality of motors, pumps, valves and hydrostatic drives. These hydraulic testers are easy to handle and capable of locating errors in a hydraulic system. This can help you in reducing outage times and performing preventative maintenance.

These hydraulic testers can be used for precisely measuring flow, pressure and temperature. The testers can also be helpful when performing hydraulic system maintenance, locating error sources on directional control valves and making valve adjustments.

The pressure-load valve with its integrated bypass-blow-out discs makes it possible to build up pressure progressively in order to check the flow in an entire working area.

#### Integrated safety shut-off (Blow-out discs)

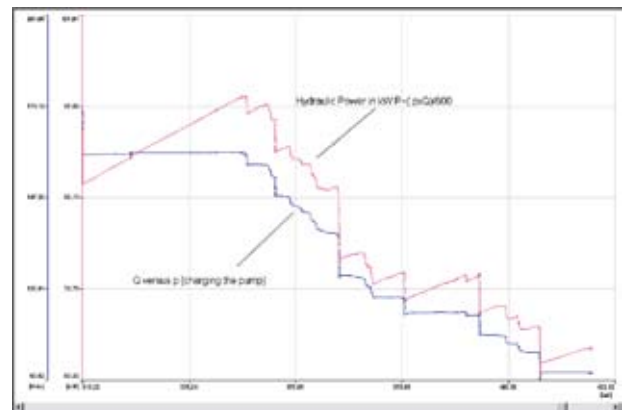

The load valve is fitted with two safety blow-out discs. The device is protected by this safety mechanism. These discs will break and the load valve will become inactive whenever the maximum allowed operating pressure ( $P_{max}$ ) is exceeded. The complete flow then runs off to the tank.

Read carefully through the operating manual before replacing the blow-out discs.

Measurement of pressure, flow and temperature using The Parker Service Master *Easy* or *Plus* and hydraulic-tester SCLV-PTQ

The p-Q diagram (to the right) shows the power determined. Especially in hydraulic pump (load sensing) systems the speed-dependent load is important to analyze. The evaluation in **SensoWin**® will be done quickly and simply.

The hydraulic power of a system can be analyzed by a combined measurement of pressure and flow (to the left). The diagram shows an application with a hydraulic-tester SCLV-PTQ. Pressure in the system is generated by the integrated loading valve.

In the evaluation power will be calculated from the flow volume and pressure of the pump.

- Measurement principle: spring/piston system
- Flow measurement with direction indication
- Response time < 2 ms
- Compact design
- Withstands pressures up to 420 bar
- Wide range of viscosity
- p/T/Q measurement possible with connection block

**Flow measurement with direction indication for mobile and stationary measurement jobs**

**Function**

When there is a flow from A to B or B to A, the piston (K) is moved. When at rest, the spring (F) and piston (K) are in equilibrium. The stroke change (S) is proportional to the flow volume and is converted by the built-in electronics to a measured value. By the change in direction of the piston (B to A) flow directions can be shown (e.g. -45.8 l/min.). The response time of the piston movement is less than 0.002 s.

**Application**

In the field of high pressure hydraulics, the rapid capture of the amount of flow is of great significance. The reaction times of the SCQ's enable the dynamic behaviour of hydraulic systems to be measured. The indication of direction is helpful when searching for faults in hydraulic systems. Rapid load changes, which can cause damage for example in valves and pumps, can be determined. Installation with a connection block permits the combined measurement of p, T and Q. Rapid assembly of the SCQ's is achieved with an in-line adapter for tube or hose installation.

Robust design makes possible extreme condition applications, such as, for example, high load changes or rates of pressure increase.

**Cable for CAN bus sensors**

Parker CAN bus cables are used to connect Parker CAN bus sensors to the **The Parker Service Master Plus** SCM-500.

The quick-plug screw connection SPEEDCON\* makes connecting simple and secure.

**CAN connection cable**

SCK-401-02-4F-4M

**CAN Y-junction**

SCK-401-0.3-Y

**CAN terminating resistor**

SCK-401-R

**Cable for analog sensors**

The **SensoControl**® diagnostics cable was designed for use in harsh working conditions.

**5-pole version**

The 5-pole cables with push-pull plugs fit to all 5-pole connections.

**4-pole version**

Diagnostic cables with 4-pole plugs are only compatible with the Serviceman types SCM-150-1-01/02 and SCM-152-2-08.

**Connection cable (5-pin)**

SCK-102-xx-02

**Extension cable (5-pin)**

SCK-102-05-12

**Adapter**

SCK-002-08

(for connecting a 4-pin sensor to a newer device)

## 18 Kits and Equipment Cases for Parker Portable Measuring Instruments

- Sturdy and tough equipment case
- Easy operation
- Automatic sensor recognition
- PC connection
- Not dependent on main power supply

The Parker Service Master *Easy-Kit*

Serviceman-Kit

ServiceJunior-Kit

Parker hand-held measuring instruments meet the requirements of modern industrial hydraulic systems as well as those of complex mobile hydraulics. They are indispensable for maintenance of hydraulic systems.

All hydraulic parameters, such as differential pressure, flow and hydraulic power can be measured, displayed and processed.

This allows precise diagnostics in mobile hydraulics as well as in construction and agricultural machinery. Quick and convenient troubleshooting is also possible.

Furthermore, comparisons between set and actual values can be made and documented.

Parker hand-held measuring instruments are an ideal tool for all service technicians who need simple hydraulic test equipment for mobile as well as industrial hydraulics.

With the **SensoWin**® software, the data can be processed on a PC.

# Parker's Motion & Control Technologies

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion or control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further information call 00800 27 27 5374

## AEROSPACE
