

Mounting Plate with rolled edges for INTERTEC CLASSIC and BASIC Cabinet Series

Advantages

Quicker

- Time and cost saving due to simple installation of the equipped mounting plate in the cabinet through the use of mounting feet and vertical adjustment
- Only two bolts are necessary to secure the mounting plate
- Easy to equip as only the edge of the plate rests on the work bench, which facilitates drilling, installation of counter nuts etc.

Better

- No bending or flexing - even with large mounting plates
- Mounting surface is fully usable due to edge mounting
- Mounting is possible on all sides of the cabinet: the C-rails of the adjacent wall panels can still be used to install accessories and equipment
- One plate for all types (standard - depth-adjustable - installation side by side, see data sheet [SD726](#))
- Simple retrofitting: by adjusting the angle bracket no precise preparatory work is required (see detail T)

Safer

- Solid construction as edges are rolled on all four sides
- Edges are folded twice on the height
- Fastening direct to the standard vertical C-rails

Wall panel HxW in mm	Mounting plate HxW in mm	Mounting plate article no.

* 2 Wall Panels, ea. W=600mm

1 Mounting Plate with rolled edges – Standard

(the illustration shows the cabinet as a cross section)

Useful internal depth = nominal depth of cabinet – 111 mm
(see annotation)

Detail T - Attachment

Detail U – Vertical Adjustment

Standard version: Sheet steel, zinc coated, 3 mm
Mounting plates without rolled edges are available in all sizes

C-rails as mounting sets have to be ordered separately depending on the type of cabinet. For depth-adjustable mounting plates use order suffix T, for installation side by side use order suffix A (see next page)

All types of mounting plates are also possible as swing versions - use order suffix S.

Mounting Plate with rolled edges for INTERTEC CLASSIC and BASIC Cabinet Series

2 Depth-Adjustable

(the illustration shows the cabinet as a cross section)

CLASSIC:

Useful internal depth = nominal depth of cabinet – 141mm

BASIC:

Useful internal depth = nominal depth of cabinet – 203mm
(see annotation)

Detail W - Attachment

Detail X - Vertical Adjustment

3 Installation Side by Side

(the illustration shows the cabinet as a cross section)

CLASSIC:

Useful internal depth = nominal depth of cabinet – 169mm
(see annotation)

Detail Y - Attachment

Detail Z - Vertical Adjustment

Please note: Additional equipment installed behind the door such as 19" swing frames, internal doors or a swinging mounting plate will reduce the usable internal depth accordingly.
